

MultiDock^{Pitfree}

- ✓ No pit required
- ✓ No civil works
- ✓ Installed in minutes
- ✓ One man operation
- ✓ Twin safety zones
- ✓ Perimeter trip bars

MultiDock Specifications

Capacity:	1000Kg EDL
Load area width:	1250mm
Load area depth:	2200mm
Overall width inc safety zones:	2755mm
Load area lowered height:	90mm
Load area raised height:	1600mm
Overall height (lowered):	2210mm
Power pack:	3ph, 415v/1ph 240v

MultiDock

"The MultiDock requires virtually no installation! Roll cages are off loaded in complete safety by one man in half the time!"

"With absolutely no ground works required the PitFree MultiDock can be fully operational within 15 minutes of delivery!"

"The PitFree MultiDock has twin operator safety zones and a full perimeter safety edge – it takes loading bay safety to another level!"

"The safest and most efficient method of roll cage delivery and dispatch!"

MultiDock provides you with the adaptability and flexibility that your loading bay requires. The standard pallet bay is designed to easily accommodate two roll cages or a single pallet with pallet truck, all handled in complete safety. The PitFree MultiDock is the only loading bay lift with operator safety zones and a full perimeter anti-trap safety edge. There is no safer, quicker or simpler method of unloading your vehicles!

TRADE PRESS NEWS

MultiDock in the news! What the UK Trade Press is reporting

The New Pitfree MultiDock – Loading Bay Roll Cage Lift

With much of the nation's grocery and other consumer products being transported within roll cages it is important that the correct loading bay equipment is utilised by retailers to ensure these loads are handled safely and efficiently. Edmolift have worked in partnership with the retail industry to produce a product specifically for this task and the result, the Pitfree MultiDock, ticks all the boxes of it's target retailer market!

"The Goods In area is a busy and often congested space with constant goods movement, the Pitfree MultiDock can be operational within 15 minutes of arriving on site and absolutely no ground works are required", say Darren Papani, Managing Director of Edmolift. "This is a massive advantage over traditional loading bay lifts which require extensive pit works that limit the use of the area for many days".

The Pitfree MultiDock can be used as a free standing lift in an open yard or in front of an existing fixed height dock. Roll cages can be wheeled directly from the rear of any vehicle and then raised or lowered to the off load height. The lowered height of the Pitfree MultiDock is just 90mm and it is supplied with a low gradient ramp.

Functionality and practicality have been successfully combined with safety. The Pitfree MultiDock is the only Loading Bay Lift with twin operator safety zones which encapsulate the operator in a steel safety frame to protect him from falls and crushing which are the two main causes of injury in the Loading Bay.

The Pitfree MultiDock easily accommodates two large roll cages as well as being suitable for palletised loads and trolleys. It has a non-slip platform surface, two sets of push button controls and a full perimeter trip bar mechanism.
